Situations each agent has met

of 240; inherited visits count

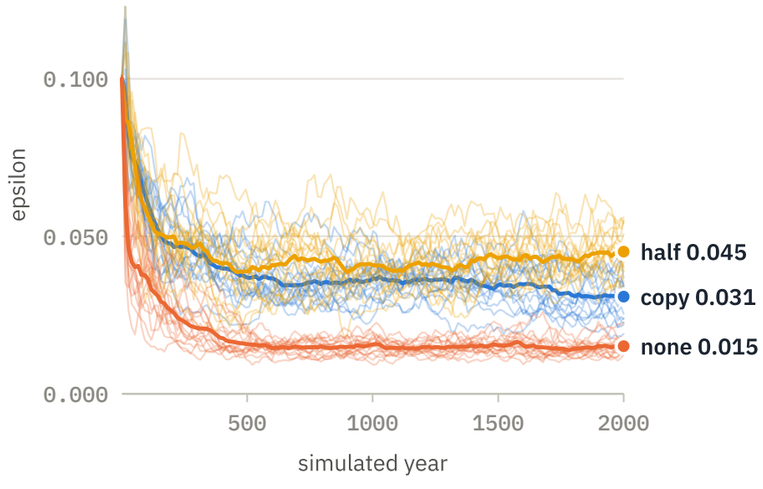

Learning rate

population mean of the gene, started at 0.2

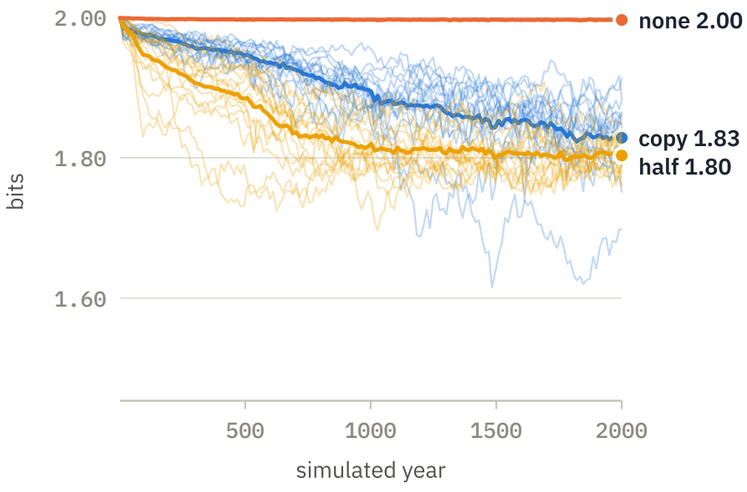

Exploration rate

population mean of the gene, started at 0.1

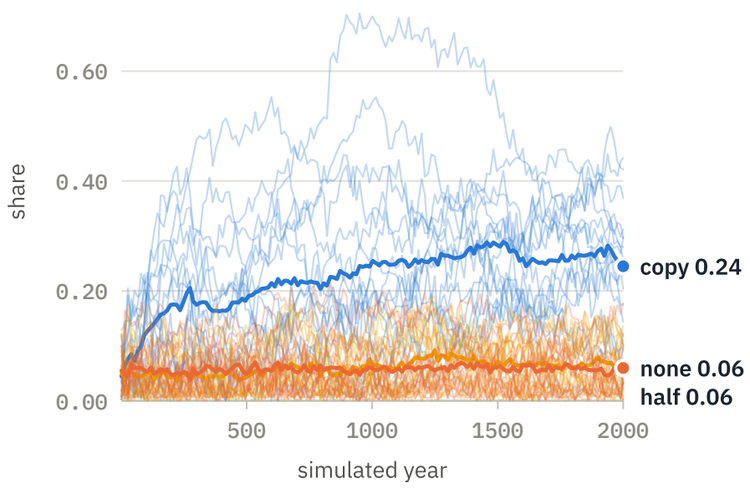

Signal entropy

bits; 2.0 means all four signals equally often

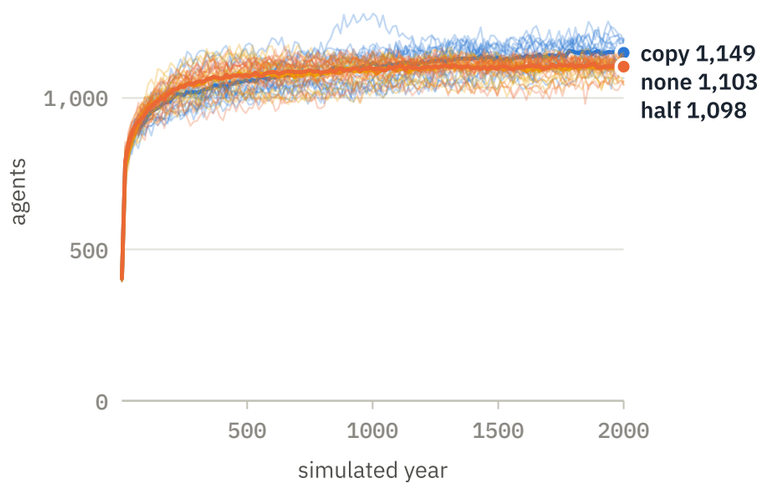

How unevenly the banks fill

|west - east| / population

Population

agents alive at the year's end

Bold lines: the mean of sixteen seeds; faint lines: each seed. copy = a child starts with its parent's Q-table, half = that table with every value halved, none = blank. Everything else is at the defaults.
